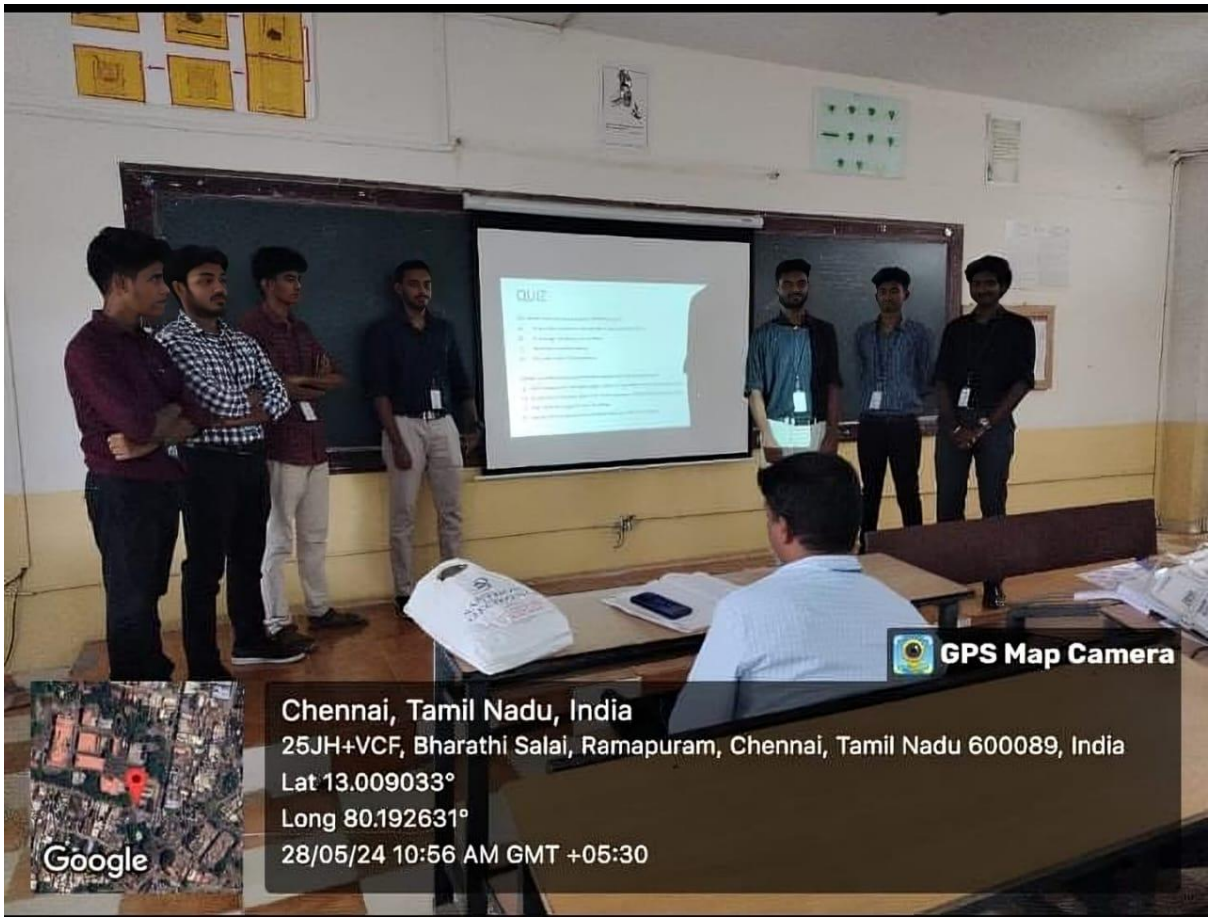
GROUP PRESENTATION

Topic : Cyber Threat Intelligence



In today's digital world, cyber threats are becoming increasingly sophisticated, targeted, and frequent. As organizations rely more on interconnected systems, the need to proactively defend against cyber attacks has grown tremendously. Cyber Threat Intelligence (CTI) plays a critical role in this landscape by helping organizations understand, detect, and mitigate cyber threats before they cause significant harm. This presentation explores the concept of CTI, its types, sources, lifecycle, and importance in strengthening modern cybersecurity strategies.

Cyber Threat Intelligence can be defined as the process of collecting, analyzing, and using information about potential or current cyber threats. Unlike traditional cybersecurity measures that are often reactive, CTI is proactive. It helps security teams anticipate attacks by understanding attacker behavior, motives, tools, and techniques. CTI is not just about gathering raw data—it involves converting that data into actionable insights that can be used to prevent breaches, respond to incidents, or improve the organization's overall security posture.

There are different types of CTI, each serving specific purposes. Strategic CTI provides high-level analysis and insights for decision makers and focuses on long-term threat trends and geopolitical factors. Tactical CTI gives detailed information about the tactics, techniques, and procedures (TTPs) used by attackers, which is useful for security operations teams. Operational CTI involves real-time or near real-time data on specific attacks, such as malware signatures or IP addresses. Lastly, technical CTI focuses on indicators of compromise (IOCs) like suspicious domain names or file hashes, helping systems detect threats quickly.

Sources of cyber threat intelligence can be internal or external. Internal sources include logs, incident reports, and network data collected by the organization itself. External sources may come from government agencies, industry reports, cybersecurity vendors, dark web monitoring, or open-source intelligence (OSINT). The challenge lies in verifying and correlating this information to ensure accuracy and relevance.

The Cyber Threat Intelligence lifecycle consists of six major phases: planning and direction, collection, processing, analysis, dissemination, and feedback. In the first stage, organizations define

their intelligence needs and objectives. Then, relevant data is collected from various sources. Once collected, this data is processed into usable formats and analyzed to identify patterns, threats, or anomalies. The analyzed intelligence is then shared with stakeholders who can act upon it. Lastly, feedback is gathered to refine future intelligence efforts. This lifecycle ensures that CTI remains focused, dynamic, and aligned with the organization's evolving risk profile.

The importance of CTI is evident in its ability to enhance threat detection, reduce response time, and support informed decision-making. It helps organizations not only defend against known threats but also anticipate new ones. By understanding the attacker's mindset and tools, cybersecurity teams can improve their incident response plans, patch vulnerabilities faster, and adapt to changing threat environments. CTI is especially valuable in industries that face advanced persistent threats (APTs), such as finance, healthcare, and government sectors.

However, implementing CTI comes with challenges. These include managing large volumes of data, avoiding information overload, ensuring data accuracy, and maintaining skilled personnel for analysis. Organizations also need to protect the sources of their intelligence and establish trust when collaborating with external threat-sharing communities. Despite these obstacles, the benefits of CTI far outweigh the difficulties, particularly when integrated into a broader cybersecurity framework.

In conclusion, Cyber Threat Intelligence is a vital component of modern cybersecurity. By providing timely, relevant, and actionable insights, CTI empowers organizations to stay ahead of cybercriminals, protect critical assets, and build resilience against future attacks.

GROUP DISCUSSION

Topic: Secularism has become a tool to justify all the wrong done by minorities

Secularism is one of the fundamental principles enshrined in the Indian Constitution. It ensures that the state maintains an equal distance from all religions and treats every citizen fairly, regardless of their faith. However, over time, debates have intensified around how secularism is practiced in India, with some people believing it has been misused or distorted. A particularly controversial claim that sparked this group discussion is the statement: “Secularism has become a tool to justify all the wrong done by minorities.” This discussion aimed to analyze this perspective from different angles—those in favor, those against, and a balanced viewpoint that addresses the complexities involved.

Supporters of the statement argued that in modern India, secularism is sometimes used as a cover to selectively shield individuals or groups from minority communities when they engage in unlawful or inappropriate activities. According to this view, actions that would be heavily condemned if committed by members of the majority community are often excused or overlooked when minorities are involved. This selective treatment, they claim, creates a double standard and undermines the very idea of equality. One of the main reasons cited for this is vote bank politics, where political parties focus on appeasing specific minority groups in order to secure electoral support. This may lead to the government ignoring wrongdoings or granting undue benefits to certain sections of the population.

Furthermore, proponents of this viewpoint also believe that the media and civil society play a role in this bias. They feel that media houses avoid reporting or criticizing negative incidents involving minorities due to fear of being labeled as “communal” or “intolerant.” This contributes to a lack of open conversation, where only selective narratives are allowed to dominate public discourse. In certain situations, even law enforcement agencies are accused of acting with hesitation, trying to maintain communal harmony at the cost of delivering fair justice. Such practices are perceived as not only unjust but also harmful to national unity, as they cause frustration and division among communities.

On the other hand, those who opposed the statement argued that such views are based on generalizations and misinterpretations. They emphasized that secularism does not mean protecting anyone from legal consequences; rather, it is about ensuring that no individual or group is discriminated against because of their religion. The idea that minorities are always defended or excused is an exaggeration. They pointed out that there are numerous instances where minorities have

faced harsh treatment or have been unfairly targeted. Instead of misusing secularism, the focus should be on ensuring justice is applied equally across all communities.

Another argument from this side was that minorities in India have historically faced marginalization, and some government schemes or special protections are meant to address this socio-economic imbalance. These policies are often misread as appeasement when they are actually tools for inclusion. The misuse of secularism by a few politicians or institutions, they argued, should not be seen as a failure of the principle itself. Additionally, participants also noted that the majority community too receives political attention and benefits, especially during elections, which shows that the issue is not limited to minorities alone.

As the discussion progressed, many participants leaned toward a more balanced view. It was acknowledged that while secularism is a noble and essential concept, its selective or politically motivated application can be problematic. The issue lies in the misuse of power and the lack of consistent enforcement of laws, not in secularism itself.

In conclusion, the discussion highlighted the need to preserve the spirit of secularism while ensuring that it is not manipulated for political or social gain. The solution lies not in discarding secularism, but in holding all individuals accountable, regardless of their religion. Only by applying the law equally and fairly can India uphold its values of unity, justice, and true secularism.

RESUME

EXECUTIVE SUMMARY:

Dedicated and detail-oriented Cybersecurity student with a strong foundation in Networking. Proficient in Python, Networking and SQL Injection with certifications in Networking Basics (Cisco) and Python Essentials. Experienced in virtual internships focused on Cybersecurity and practical exposure to threat analysis, ethical hacking concepts, and network security fundamentals. Seeking to leverage technical expertise and a proactive mindset in an entry-level cybersecurity role to contribute to organizational security and growth.

EDUCATION:

- SRM EASWARI ENGINEERING COLLEGE , Ramapuram

  BE Computer Science and Engineering (Cyber Security)
  2022 - 2026 (ONGOING)
  CGPA: 8.32

- ADHIYAMAN PUBLIC SCHOOL, Uthangarai

  Higher Secondary (12th)
  Percentage of Mark: 92.4
  2021 – 2022

- ADHIYAMAN PUBLIC SCHOOL, Uthangarai

  Secondary (10th)
  Percentage of Mark: 89.7
  2019 - 2020

CERTIFICATIONS:

- Python Programming - Spoken Tutorial, IIT Bombay
- Generative AI Batch (Level 3) - Google Developer Student Club, EEC
- Arcade Batch (Level 3) - Google Developer Student Club, EEC
- Python (Basic) – Hacker Rank
- Python Essentials 1 - CISCO Networking Academy
- Networking Basics - CISCO Networking Academy
- SQL Injection Attacks - EC-Council

NPTEL:

1. Foundations of R Software - 72%
2. Introduction to Industry 4.0 and Industrial Internet of Things - 68%

Internship:

- Cybersecurity Virtual Internship - Teachnook

Project:

- Network Traffic Analyzer – Teachnook
- Ticket Raising and Management Portal – Airports Authority of India

---

SKILLS:

Technical:

- Networking Basics
- SQL Injection
- Python

- HTML, CSS, Java Script
- Web Development

Soft skills:

- Communication
- Leadership
- Time Management

VOLUNTEERING:

- Rotaract Club Member at Easwari Engineering College
